

Recording a video using your Windows PC

If you are asked to record a video and have a PC, please take a moment to review these instructions for better results

App: Use the windows app "Camera"

It will open like this:

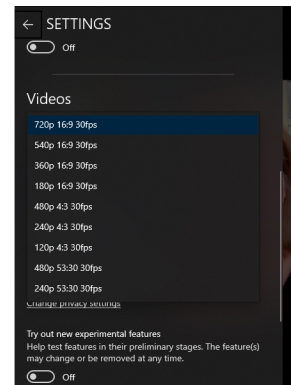

settings

2 things need to be checked:

1. Make sure the setting is moved to "camera"

2. Check the "settings" to make sure that the video is set for the highest quality (either 720p or 1080p...higher number= higher quality)

When recording:
Straight on, not angled:

NO

YES

Less busy backgrounds better than busy...

...then make sure to balance the light for less shadow

Good light
Busy background

Good background
Too much shadow

Good light
Good background

Your file should be saved to the Pictures > Camera Roll (unless you have changed it)
